## Summary:

Computer Science student and aspiring Data Engineer with strong foundations in SQL, Python, relational and client-side data modeling, schema design, and data processing. Experienced in architecting offline-first database systems, building data validation layers, and developing business intelligence solutions using Power BI. Combines software development fundamentals with analytical problem-solving to design reliable data workflows, maintain data integrity, and bridge backend logic with data analytics.

## Educational Background:

- Bachelor of computers and artificial intelligence at Cairo university June 2024 - June 2028
- Grade: Good

## Courses

### DEPI (Digital Egypt Pioneers Initiative) — Microsoft Data Engineer Track July 2026 - Present

- Enrolled in an intensive technical program focused on data engineering fundamentals, database management, and enterprise data processing.

### GCI World 2026 | Matsuo-Iwasawa Laboratory, The University of Tokyo September 2026 – Present

- Completed coursework in Python Programming, SQL, Feature Engineering, Machine Learning, Time Series Analysis, and Analytical Statistics.

### Huawei Certified ICT Associate (HCIA) | Huawei

July 2025 – August 2025

### Huawei Certified ICT Professional (HCIP) | Huawei

August 2025 – September 2025

## Work Experience

### GEN Academy | Partner & Technical / Data Engineering April 2026 – Present

- Co-founded and engineered the core local-first data architecture for an educational management platform using Next.js, TypeScript, and Dexie.js (Indexed DB).
- Designed and implemented structured data models for core entities, including students, class groups, attendance logs, and financial transactions.
- Built schema evolution and migration strategies across local database versions to ensure backward compatibility and prevent data loss.
- Enforced strict data validation rules, relational integrity checks, and data snapshotting to maintain historical consistency across billing and attendance records.
- Developed automated JSON-based backup and restore workflows alongside robust service-layer business logic for offline data persistence.

### Freelance / Self-Employed | Data Analyst & Data Processing March 2026 – Present

- Engineered SQL and Python scripts to extract, clean, and preprocess multi-source datasets, eliminating structural anomalies and enhancing data quality.
- Designed interactive Power BI dashboards to track key performance indicators and transform raw business records into structured analytical views.
- Automated repetitive data transformation workflows, establishing reproducible pipelines for reporting and data validation.

## Technical Skills:

**Programming Languages:** Python, C++, TypeScript

**Data & Databases:** SQL, Relational Data Modeling, Database Design, Data Cleaning, Data Processing, Indexed DB, Dexie.js

**Data Engineering & Architecture:** ETL Concepts, Data Pipelines, Schema Evolution & Migrations, Data Validation & Integrity Rules, Offline-First Data Architecture, Data Backup & Recovery

**Analytics & Business Intelligence:** Power BI, Microsoft Excel (Pivot Tables, Analytical Modeling), Data Visualization, Statistical Analysis, Time Series Analysis

**Software Engineering & Web:** React, Next.js, Progressive Web Apps (PWA), Service Workers, Object-Oriented Programming (OOP)

**Tools & Systems:** Git, Linux, Wireshark

## Soft Skills:

---

- Responsibility and reliability.
- Teamwork and collaboration.
- Attention to detail.
- Commitment and discipline.
- problem solving

## Language skills:

---

- Arabic: Mother tongue
- English: Very Good.

## Extracurricular Activities:

---

### English Teacher Assistant (Volunteer)

September 2024 – September 2026

- Assisted in teaching English and provided one-on-one academic guidance to students.
- Supported lesson delivery, structured practice, and student performance follow-up.
- **Designed and developed a customized student management system** to digitize and streamline student, attendance, and academic follow-up processes.
- **Managed and prepared digital educational content and administrative documents** using Microsoft Word, Excel, PowerPoint, and PDF tools.
- Created structured reports, worksheets, presentations, and student records to improve organization and teaching workflow.
- Automated and organized routine administrative tasks through digital tools, improving efficiency and reducing manual work.
